

YOUNG SPEAKER

Dr. Jesús Campos

CSIC, Spain

Jesús Campos studied Chemistry at University of Sevilla and moved to the University of Manchester to work under the guidance of Prof. John D. Sutherland (MPhil, 2008). Back to Spain he joined the group of Prof. Ernesto Carmona to work on fundamental organometallic chemistry obtaining an International PhD Distinction (2012) after spending a visiting stay with Prof. Maurice Brookhart (University of North Carolina, USA, 2010). He returned to the USA as a postdoctoral researcher joining the group of Prof. Robert H. Crabtree at Yale University to work in green catalysis and energy-related transformations (2013-2014). He was awarded with a Talentia Postdoc Fellowship for a second postdoctoral period in the laboratories of Prof. Simon Aldridge at University of Oxford to

focus on bond activation and catalysis with main group systems (2014-2016). In 2016 he moved back to Sevilla as a Marie Curie fellow and one year later he secured a permanent position as Research Scientist of the Spanish National Research Council (CSIC) to develop his independent career at the Institute of Chemical Research (IIQ) at Sevilla. Under the umbrella of an ERC Starting Grant project he has recently focused on the exploration of unusual cooperative mechanisms in the context of bond activation and catalysis.
